

Testing & Validation Control

Smart2V is our central software for **testing** and **validation control**. It brings requirements, test data and verification steps into one system.

Challenges

Unclear requirements, late identification of risks, messy test data and lack of documentation of validation steps

Services & Functionalities

R&D Solutions

Define clear targets and validation approach

Smart2V Platform

Unifies test data and evaluation logic in one system

Design verification

Every activity is defined, documented with traceable criteria

Data-driven validation

connects technical values and specifications into a clear basis for decisions

Benefits

- ✓ Faster validation process
- ✓ Early risk visibility
- ✓ Centralized test data
